

20th August 2009

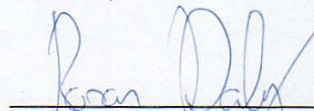

To Whom It May Concern:

Wind Farm Civils Ltd (WFC) were employed by SWS Energy as the main civil contractor for the Flughland wind farm project which is comprised of 4 number Enercon 2.3MW turbines and was constructed during 2008/2009. WFC were responsible for the design and construction of the project infrastructure including onsite and off site access roads, hardstands and drainage. They also constructed the onsite 20kV substation and carried out onsite trenching works according to the electrical contractors design.

WFC also carried out over 4km of offsite trenching works to accommodate the 20kV grid connection which travelled adjacent to public road as well as across private farm lands.

I can confirm that SWS Energy were very satisfied with WFC performance on this project, which was carried out to a high standard and completed on time and within budget. In addition to their technical capabilities WFC also displayed good skills in communicating and cooperating with other project parties including contractors, government authorities and the general public. Based on our experience I would not hesitate to recommend Wind Farm Civils Ltd for future work.

Sincerely

Ronan Daly
SWS Project Manager
